

SAGESA Research and Training Network Activities

1. Establishment of the SAGESA Research and Training Network

In 2021, the [SAGESA project](#) established a research and training network, to facilitate capacity building for pathogen genomics and surveillance of anti-microbial resistance (AMR) in Africa. The SAGESA project is funded by the [Cambridge Africa ALBORADA Research Fund](#), and is a collaboration by scientists from the [National Institute of Communicable Diseases](#) in South Africa, the Faculty of Medicine and Health Sciences, University of Zimbabwe, [Wellcome Connecting Science](#) and the [Centre for Genomic Pathogen Surveillance](#).

Project goal

The goal of this project was to establish a peer network platform which provides access to training and expertise to scientists interested in genomics of disease pathogens and surveillance of antimicrobial resistance (AMR).

Objectives

- Establish the training and research network for genomic surveillance of AMR in Africa
- Provide training for bioinformatics in AMR genomics in the SADC region
- Establish collaborative research and training projects for AMR surveillance

Target audience

Scientists based anywhere in the world interested in developing skills and resources for AMR genomics in Africa and globally.

Joining the network

To join the network simply [contact us](#) or access an [online form](#) for providing basic personal information, country of origin and consent for use of media for promotional purposes by the collaborating organisations.

Other network scientists can be found [on this Padlet](#).

Additional interactivity is available on the [Slack channel via this link](#)

THE SAGESA Core Team developed activities encompassing virtual meetings and training and facilitated a network of scientists interested in sharing knowledge and skills in genomics of antimicrobial resistance (AMR) Africa.

2. SAGESA Launch and Needs Assessment Workshop

The SAGESA launch meeting, held in November 2021, facilitated the introduction of initial network members – approximately 50 at the time. This was followed by a needs assessment workshop to explore network, research and training needs in Africa.

Workshop objectives

- Official launch of SAGESA Network – the first Africa AMR genomics research and training network.
- Discuss needs and gaps within the region with regards to application of genomics for AMR surveillance – a focus on training needs and network development.
- Provide an overview of the planned/proposed SAGESA activities and discuss the future of the network.

A virtual hybrid model used live discussion of topics and the Padlet platform where participants provided detailed information about – the current status of training and research, training needs and research interests, and expectations of SAGESA network.

3. SAGESA Network Curriculum

Needs assessment analysis from the SAGESA Launch Workshop guided the development of the SAGESA Curriculum consisting of 5 webinars and a 3 Day bioinformatics workshop. Feedback was collected after each event. Click on links below for:

Course overview

[Course website](#)

In collaboration with the [National Institute of Communicable Diseases \(NICD\)](#), South Africa , we are pleased to announce the AMR Bioinformatics course as part of the [SAGESA network](#) aimed at training and building capacity for genomic surveillance of AMR in Africa.

Antimicrobial resistance (AMR) is a global public health emergency and threatens the safe delivery of modern medical care. Global projections of the negative impact of AMR predict the loss of nearly 10 million lives and a cumulative loss of global production up to 100 trillion US dollars by 2050. AMR requires immediate, concerted, international, collaborative action to monitor its prevalence and spread throughout the world. The importance of this has been recognised both by the United Nations and by the World Health Organisation; the latter has published a list of priority pathogens and a global strategy for AMR surveillance.

The challenges of controlling AMR in low- and middle-income countries (LMICs) may be considerable for several reasons. Firstly, antibiotics may be available for human and animal use without a prescription, resulting in unregulated use. Secondly, accurate data on antimicrobial prescription or consumption may not be readily available. Thirdly, there may be limited knowledge about the appropriate use of antibiotics and a lack of antimicrobial policies or stewardship programmes. Finally, there may be limitations in healthcare facilities and laboratory capacity for the detection and management of AMR.

This 3-day workshop aims to address some of these challenges by improving the knowledge and skills of individuals interested in antimicrobial resistance in bacterial pathogens in Africa. It will contain hands-on WGS-based bacterial typing methods such as AMR detection, cgMLST, MLST, core genome SNP based phylogenetic analysis.

Target audience

This workshop is free to attend and open to [SAGESA](#) network members based in Africa who are actively engaged in, or soon to commence, research, clinical practice, provision of clinical services, or policy development related to AMR in bacteria. To join the network [please click on this link](#).

Learning outcomes

At the end of the course participants should be able to

- Implement data workflows and bioinformatic analysis of genomic sequence data, including risk and resistance prediction for bacterial epi and pandemic response
- Explain Genomic surveillance and linking epidemiological data, outbreak analyses and global contexts, geographical contexts
- Demonstrate interpretation and application in public health and epidemic/pandemic response

Content and activities overview

- Genomic data analysis
- Interpretation for various applications
- Training support mentorship and networking

Organisers and developers

Wellcome Connecting Science – Isabela Malta, Alice Matimba, Dusanka Nikolic, Melanie Sharpe, Martin Aslett

National Institutes of Communicable Diseases – Stanford Kwenda

University of Zimbabwe – Joconiah Chirenda

Module leads

- [Annie Chan](#), National Institute for Communicable Diseases, South Africa
- [Arun Decano](#), St. Andrews University, UK
- [Erikson Odih](#), University of Ibadan, Nigeria
- [Narendar Kumar](#), Wellcome Sanger Institute, UK
- [Pimlapas Leekitcharoenphon \(Shinny\)](#), National Food Institute, Denmark
- [Stan Kwenda](#), National Institute for Communicable Diseases, South Africa

Guest Speakers

- Plenary Lecture: [Rene Hendriksen](#), National Food Institute, Denmark
- Lecture 1: [Zamantungwa Khumalo](#), ClinVet, South Africa
- Lecture 2: [Joconiah Chirenda](#), University of Zimbabwe, Zimbabwe
- Lecture 3: [Sabelle Jallow](#), National Institute for Communicable Diseases, South Africa
- Lecture 4: [Lavania Joseph](#), National Institute for Communicable Diseases, South Africa
- Lecture 5: [Michelle Lowe](#), National Institute for Communicable Diseases, South Africa

Timetable

Pre Course	AMR Bioinformatics Workshop - Africa. 25th to 27th of April					
Pre-course intro	Time	Wednesday	Thursday	Friday	Time	
Participants Intro		25/5/2022	26/5/2022	27/5/2022		
Overview of lab workflow, Zamantungwa Khumalo, ClinVet	08:30	Genomic surveillance Overview			08:30	
	09:00	Intro to sequence data; QC of raw sequence data Contamination & species ID (lecture & practical 1) <i>Annie Chan</i>	AMR detection & surveillance (seminar) <i>Rene Hendriksen</i>	Phylogenetic analysis (SNP-based and cgMLST) (lecture & practical 5) <i>Pimlapas Leekitcharoenphon</i>	09:00	
	09:30				09:30	
	10:00		Intro to bacterial subtyping approaches (lecture) <i>Erikson Odih</i>		10:00	
	10:30			10:30		
		Break	Break	Break		
	11:00	Lab based AMR typing using ASTs (Lecture) <i>Sabelle Jallow</i>	Bacterial subtyping approaches (practical 4) <i>Erikson Odih</i>	Phylogenetic analysis (SNP-based tree construction) (group project 2) <i>Pimlapas</i>	11:00	
	11:30					11:30
	12:00	Lunch Break				12:00
	12:30	De novo assembly vs. ref based mapping (lecture & practical 2) <i>Arun Decano</i>	Case studies: genomic surveillance in public health (TB) <i>Lavana Joseph</i>	Case studies: genomic surveillance in public health <i>Michelle Lowe</i> (pre-	12:30	
	13:00				13:00	
	13:30		AMR typing - WGS data (lecture) <i>Arun Decano</i>	Transmission analysis (lecture & practical 6) <i>Narender Kumar</i>	13:30	
	14:00					14:00
	14:30					14:30
	15:00	Break	Break	Break	15:00	
	15:30	Genome annotation (lecture & practical 3) <i>Stan Kwenda</i>	AMR typing using WGS data (group project 1) <i>Arun Decano, Stan Kwenda, Narender Kumar</i>		15:30	
16:00	Wrap up and network discussion			16:00		
16:30				16:30

Introductory session

- [Welcome and overview](#)
- [Reading material](#)

Session 1: Intro to sequence data & QC

- [Introductory presentation](#)
- [Hands-on exercises manual](#)
- [Hands-on exercises example commands](#)

Session 2: Genome assembly

- [Introductory presentation](#)
- [Hands-on exercises manual](#)

Session 3: Genome annotation

- [Introductory presentation](#)
- [Hands-on exercises manual](#)
- [Hands-on exercises online version](#)

Session 4: Bacteria subtyping

- [Introductory presentation](#)
- [Hands-on exercises manual](#)

Session 5: AMR detection

- [Introductory presentation](#)
- [Hands-on exercises manual](#)

Session 6: Phylogenetic analysis

- [Introductory presentation](#)
- [Visualization presentation](#)
- [Hands-on exercises manual](#)

Session 7: Transmission analysis

- [Introductory presentation](#)
- [Hands-on exercises manual](#)
- [Use this link to navigate to the microreact instance for this tutorial](#)

Session 8: SAGESA Network discussion

- [Course feedback](#)

**Some content was adapted from the WCS AMR for Bacterial Pathogens Course*

Software and datasets

Software Name	Version*	Link	Session
Anaconda3			Raw sequence data QC
FastQC	0.11.9		De novo assembly
MultiQC	1.6		AMR prediction
Trim-galore	0.6.2		Genome annotation
BactInspector	0.1.3		Reference based mapping
Shovill	1.1.0		General tools
QUAST	5.0.2		
abricate + (preloaded resfinder DB & NCBI DB)	1.0.1		
prokka			
snippy			
bwa			
bowtie2			
samtools	1.11		
R + TidyVerse			

Planning and development

Technical resources and platforms

All participants and training team members will use own laptops, and should have access internet.

- Minimum requirements for the computer should be 8GB RAM, i5 processor and 80GB hard disk space
- All have to install Virtual Box to use a Virtual Machine containing all software and datasets
- Zoom as the meeting platform, participants pre-register
- Slack Workspace for interactions, Q&A and networking
- All courses materials compiled on Github repository

Advertising and marketing

- Directly to SAGESA members via emails and Slack
- WCS Newsletters, Twitter and LinkedIn Platforms
- SAGESA Twitter
- Personal networks in Africa region

Application and selection

- Application set up in V1 platform
- Based on justification and relevance of work or research; Benefit to current work and to colleagues
- Application received – over 300
- No. of applications accepted – 43

Application form questions:

1. First name
2. Last name
3. Current role
4. Department, institute
5. Country
6. Nationality
7. Highest level of qualification
8. Subject area of work
9. Previous jobs (please list up to a maximum of 3)
10. Justification for attending this course. Please note that our courses are frequently oversubscribed and the selection committee relies heavily on this section to make its decision. Please provide an outline of your work (research project(s) and/or clinical/healthcare activities)
11. How will you use the training to benefit your work?
12. Are you currently generating or analysing genome sequence data?
13. How would you rate your skills in command line/Linux?
14. What is your computer processor (e.g i3, i5, i7...)
15. Do you have a stable internet connection?

Post-course feedback questions

Refer to attachments separately

Timelines Overview

The SAGESA project is funded by the [Cambridge Africa ALBORADA Research Fund](#), and is a collaboration by scientists from the [National Institute of Communicable Diseases](#) in South Africa, the [Faculty of Medicine and Health Sciences](#) at the University of Zimbabwe, [Wellcome Connecting Science](#) and the [Centre for Genomic Pathogen Surveillance](#), UK.

Item	Activity	Dates	Respons.
Finalise course description	Programme outline; target audience, pre-requisites	Done	AM/IM
Development and delivery teams	Finalise module leads, instructors, facilitators, assistants	Get confirmation by 28/02	IM/SK
Curriculum	Course plan - Develop module outlines, objectives, activities	18/03	AM/IM/SK
Call for participant applications, review and selection	Application forms	Open: 16/03 Close: 15/04 Selection: 25/04	IM/MS
Develop training materials	Lecture videos, resources and contact session guides	15/04	Training team
Reviewing and testing	All materials including VM and software and datasets to be tested and approved	29/04	MA/SK/ Training team
Course delivery	Virtual delivery	25 - 27 May	All
Feedback	Participant and training team feedback	10/06	All
